

Dear Hiring Team,

I am a full-stack engineer who thrives on turning complex business requirements into production-ready software. For the past four years at Payoneer I have planned, built, and operated high-volume microservices in C# that move millions of dollars daily. My focus on resilient architecture—HA clusters, graceful degradation, and exhaustive automated tests—helped us maintain five-nines availability while meeting stringent financial-regulatory SLAs. I also led integrations with multiple card networks and banking partners, ensuring each flow was both performant and compliant. On the front end I crafted React-based payment experiences that reduced checkout friction and lifted conversion by double digits.

Before fintech I designed a Python data-mining platform at SolidCAM that empowered data scientists to extract actionable insights from terabytes of CAM telemetry. Earlier, at Efcom, I shipped Android apps, built IoT test harnesses in C#/Arduino, and spun up AWS EC2 sites for Amazon Mechanical Turk studies—hands-on exposure to mobile, embedded, and cloud at once. This breadth taught me to pick the right tool for each layer of the stack and to communicate effectively with multidisciplinary teams.

I hold a B.Sc. in Computer Science from Ben-Gurion University, where elective work in reinforcement learning, computer vision, and a blockchain capstone nurtured my passion for applied research. Today I routinely leverage that curiosity to evaluate new paradigms—from observability with Kubernetes & Azure DevOps pipelines to event-driven patterns on AWS. My toolkit spans C#, Python, JavaScript/TypeScript, React, Docker/K8s, Azure, AWS, SQL, MongoDB, and Redis, and I am as comfortable white-boarding system designs as I am profiling a hot code path.

I am eager to bring this mix of scalability know-how, product empathy, and lifelong learning to your team—delivering features that delight users and move key metrics. I look forward to discussing how my background can accelerate your roadmap and culture of engineering excellence.

Thank you for your consideration,

Itay Osovlanski
